Section label: About

Heading: Who I Am

Self-taught software developer, systems designer and founder of DeDynamics. Based in Heerenveen, the Netherlands.

I learn by building. When I do not know something, I say so and work it out. When I know something and I am good at it, I do not pretend otherwise.

I am neurodivergent. That is not a marketing angle. It directly affects how I think, work and design software. I care about clear interfaces, persistent context and systems that reduce unnecessary mental work.

I was a photographer before I became a developer, and I still am one. Photography taught me to notice structure, detail and what does not belong in the frame.

Section label: Expertise

Heading: What I Do

Agentic AI Systems

I design and build distributed agent networks: MCP services, multi-agent coordination, shared tools, session recovery and persistent context across models and machines.

Bionic Persistent Memory

Bionic MaxMem is the most ambitious part of my infrastructure work. It is designed to keep agents oriented across sessions, crashes, workstations and model changes. It is not another chat-history wrapper.

Software Development

TypeScript, JavaScript, React and Node.js. I build frontends, backends, APIs, authentication and deployment as parts of one system, usually on Cloudflare.

Product Development

I build from problems I actually understand. Amethyst Mapper began as a tool for managing my own projects. I used it to plan and develop its public version, and I now use it to build the next versions. It is an integrated mind-mapping platform, not an IDE.

Section label: Work

Heading: Projects

DeDynamics

My company and the parent structure for my software, AI and creative work.

DDpro-Net

A distributed agent network connecting multiple AI agents, MCP services, tools and shared Bionic MaxMem across machines and sessions.

Amethyst Mapper / Mapper+

An integrated mind-mapping platform for planning, research and complex project work. Mapper FFA is local-first. Mapper+ adds managed, AI-assisted workflows.

DeCogSys Max

My working architecture for persistent context, memory, role separation and coordination between people and AI agents.

Daydream Shooter's Studio (daydream.photography)

My photography practice. Portrait, event, product and conceptual work, available selectively.

Section label: Contact

Heading: Get in Touch

No contact form. Contact me directly.

Open to software work, technical collaboration, product discussions and selected photography assignments.

Email: 1@aleksdubowski.pro

Best for projects and anything that needs proper context.

WhatsApp: +31 618 688 320

Best for short questions and direct conversation.

Based in Heerenveen, the Netherlands. Available remotely and on location.

I read my messages myself. You will not receive an automated sales reply.
